SUMMARY

Backend Software Engineer with 3+ years of combined full-time and internship experience building Java/Spring Boot services and REST APIs on AWS. Shipped identity integrations (OAuth2, SAML, SCIM) used by 60,000+ enterprise users and built monitoring with Prometheus, Grafana, and CloudWatch. MS in Information Systems, Northeastern University (Apr 2026).

TECHNICAL SKILLS

Languages & Databases: Java, Python, JavaScript, SQL, Bash; PostgreSQL, MySQL, Redis, MongoDB, Elasticsearch
Backend & APIs: Spring Boot, Spring Security, REST APIs, Kafka, Node.js, React; OAuth2, OIDC, SAML, JWT, SCIM, LDAP
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, IAM, CloudWatch), Docker, Kubernetes, Terraform, CI/CD (GitHub Actions)
Observability & Testing: Prometheus, Grafana, CloudWatch, ELK; JUnit 5, Testcontainers, Mockito, Jest, Gatling

EXPERIENCE

Software Development Engineer, miniOrange Software Securities, Pune, India **Jul 2022 – Jun 2024**

- Enabled single sign-on for 60,000+ enterprise users in finance, healthcare, and education by architecting 2 production SSO connectors in Java and Spring Boot (OAuth2, SAML, OIDC, JWT, LDAP).
- Helped close a $50K Phase 1 contract with a Tier-1 telecom by building a fault-tolerant SOAP-to-REST layer that connected its legacy systems to a modern identity provider and Duo MFA with no downtime.
- Unlocked $40K in revenue from 3 enterprise customers by building webhook-triggered SCIM sync between external identity providers and miniOrange IAM, automating user lifecycle management and debugging sync failures with customer teams.
- Cut customer deployment time by 83% (3 hours to 30 minutes) by redesigning the onboarding workflow and scoping OAuth2 and SAML integrations directly with enterprise clients.
- Reduced API response latency by 40% by resolving MySQL query bottlenecks in the user-provisioning, SSO, and MFA REST APIs.

Full-Stack Developer Intern, IMATMI, India **Aug 2021 – May 2022**

- Built a MERN platform for students with dyslexia (React UI, REST APIs, MongoDB, JWT auth with role-based access); geolocation-based matching reached 85% successful pairings for 900 users.
- Cut real-time video session latency from 100ms to 20ms with WebSocket integration and message batching; made report generation 75% faster through MongoDB query optimization.

Software Developer Intern, InfoSpeed Services, India **Jan 2021 – Apr 2021**

- Built a Java Spring Boot cargo-tracking module for a warehouse application, processing 15,000 daily barcode scans and tracking 600 containers across 4 warehouses in real time.
- Set up centralized logging (SLF4J, Logback, ELK), cutting incident resolution time from 2 hours to 1 hour.

PROJECTS

RateLimitX – Distributed Rate Limiting Service | *Java, Spring Boot, Redis, Kafka, Kubernetes, Prometheus*

- Built a Redis-backed rate limiter (Java 21, Spring Boot) with JWT auth and tiered limits; all three algorithms run as atomic Lua scripts on Redis time, verified by a 200-thread test that admits exactly the limit.
- Added a circuit breaker with an in-memory fallback: with Redis frozen for 40 s under load, 0 of 2,800 requests failed on both Docker Compose and 2-replica Kubernetes, and deleting a pod under load dropped 0 requests.
- Added an optional Kafka analytics feed (non-blocking producer that drops events rather than delay requests; idempotent consumer writing hourly aggregates to PostgreSQL); 180 tests run in CI with a Trivy scan and a kind-based Kubernetes deploy.

Cloud-Native Application & Infrastructure | *AWS, Terraform, Node.js, Docker, GitHub Actions*

- Provisioned AWS infrastructure with Terraform (VPC, EC2, ALB, ASG, RDS, Lambda, S3) for a containerized Node.js app.
- Built a GitHub Actions CI/CD pipeline (Docker, ECR) that deploys on every push to main.
- Added CloudWatch/SNS alarms (unhealthy hosts, CPU, Lambda errors, 5XX); least-privilege IAM, no hardcoded credentials.

AI Phishing Detector – Chrome Extension | *JavaScript, HTML/CSS, Gemini API, Node.js, Jest*

- Built a Manifest V3 extension scoring phishing risk with 20+ rule checks (URL, DOM, brand impersonation) and Gemini 2.5 Flash.
- Blocks high-risk URLs before the page loads and shows color-coded risk badges in a popup and dashboard UI.
- Wrote 71 Jest tests across 5 suites and an optional Node/Express/MongoDB reporting API.

EDUCATION

Northeastern University – M.S. in Information Systems, Boston, MA **Sep 2024 – Apr 2026**

Pune Institute of Computer Technology (SPPU) – B.E. in Electronics and Telecommunication **Aug 2018 – Jul 2022**
